

2) a - h_0 : "Sou humano"
 h_1 : "tenho cão"

$$((h_1 \rightarrow h_0) \wedge (\neg h_1 \rightarrow h_0))$$

b - h_0 : "Neve"
 h_1 : "Está frio"

$$(\neg(h_1 \rightarrow h_0))$$

c - h_0 : "Limitada"
 h_1 : "Conjugente"

$$(h_1 \rightarrow h_0)$$

d - h_0 : "ímpar"
 h_1 : "ímpar"
 h_2 : "é 2"

$$((h_1 \wedge (\neg h_2)) \rightarrow h_0)$$

4) a - $\varphi[h_2/h_0] = h_2 \rightarrow (\neg h_2 \rightarrow \neg h_1)$

$$\varphi[(h_0 \wedge h_1)/h_1] = h_0 \rightarrow (\neg h_0 \rightarrow \neg(h_0 \wedge h_1))$$

$$\varphi[h_{2026}/h_{2025}] = h_{2026}$$

b - ii) $\text{sub}(\varphi) =$

$$\exists \varphi \in \text{sub}(h_0 \rightarrow (\neg h_0 \rightarrow \neg h_1))$$

$$= \exists \varphi \in \text{sub}(h_0) \cup \text{sub}(\neg h_0 \rightarrow \neg h_1)$$

$$= \exists \varphi \in \text{sub}(h_0) \cup \exists \neg h_0 \rightarrow \neg h_1 \in \text{sub}(\neg h_0) \cup \text{sub}(\neg h_1)$$

$$= \exists \varphi \in \text{sub}(h_0) \cup \exists \neg h_0 \rightarrow \neg h_1 \in \text{sub}(\neg h_0) \cup \text{sub}(\neg h_1) \cup \text{sub}(h_1)$$

$$= \exists \varphi, h_0, \neg h_0 \rightarrow \neg h_1, \neg h_0, \neg h_1, h_1$$

$$= \exists \varphi, h_0, \neg h_0 \rightarrow \neg h_1, \neg h_0, \neg h_1, h_1$$

5) a- i) $\mu(\perp) = 0$

ii) $\mu(p_i) = 0$, $p_i \in \mathcal{V}^{CP}$

iii) Se $\varphi = \neg \psi$, $\psi \in \mathcal{F}^{CP}_{\text{então}}$

$$\mu(\varphi) = 2 + \mu(\psi)$$

iv) Se $\varphi = \psi_1 \square \psi_2$, $\psi_1, \psi_2 \in \mathcal{F}^{CP}_{\text{então}}$
 $\mu(\varphi) = 2 + \mu(\psi_1) + \mu(\psi_2)$

b- i) $\nu(\perp) = 0$

ii) $\nu(h_i) = 1$, $h_i \in \mathcal{V}^{CP}$

iii) Se $\varphi = (\neg \psi)$, $\psi \in \mathcal{F}^{CP}_{\text{então}}$

$$\nu(\varphi) = \nu(\psi)$$

iv) Se $\varphi = \psi_1 \square \psi_2$, $\psi_1, \psi_2 \in \mathcal{F}^{CP}$ e
 $\square \in \{\wedge, \vee, \rightarrow, \leftrightarrow\}$

$$\nu(\varphi) = \nu(\psi_1) + \nu(\psi_2)$$

c- i) $\kappa(\perp) = 0$

ii) $\kappa(h_i) = 0$, $h_i \in \mathcal{V}^{CP}$

iii) $\kappa(\neg \psi) = \kappa(\psi)$, $\psi \in \mathcal{F}^{CP}$

iv) $\kappa(\psi_1 \square \psi) = \kappa(\psi_1) \cup \kappa(\psi_2) \cup \{\square\}$,
 $\psi_1, \psi_2 \in \mathcal{F}^{CP}$, $\square \in \{\wedge, \vee, \rightarrow, \leftrightarrow\}$

d- i) $\perp[\perp/h_7] = \perp$

ii) $h_i[\perp/h_7] = \begin{cases} \perp, & \text{se } i = 7 \\ h_i, & \text{se } i \neq 7 \end{cases}$

iii) $(\neg \psi)[\perp/h_7] = (\neg(\psi[\perp/h_7]))$

iv) $(\psi_1 \square \psi_2)[\perp/h_7] = ((\psi_1[\perp/h_7]) \square (\psi_2[\perp/h_7]))$

6) a - 1) $v(\perp) = 0$

$\#var(\perp) = 0$ Logo é verdadeiro

2) $v(p_i) = 1$

$\#var(p_i) = 1$ Logo é verdadeiro

3) Caso da negação

H.I. $\rightarrow$ Assumir que $v(\psi) \geq \#var(\psi)$

a) $v(\neg \psi) = v(\psi)$

b) $\#var(\neg \psi) = \#var(\psi)$

Logo, substituindo na igualdade:

$$v(\neg \psi) \geq \#var(\neg \psi)$$

Logo é verdadeiro

4) Conectivos binários

H.I. $\rightarrow v(\varphi_1) \geq \#var(\varphi_1)$ e $v(\varphi_2) \geq \#var(\varphi_2)$

Seja $\psi = \varphi_1 \square \varphi_2$ com $\square \in \{\wedge, \vee, \rightarrow, \leftrightarrow\}$
e $\varphi_1, \varphi_2 \in \mathcal{F}^{CP}$

$$v(\varphi_1 \square \varphi_2) = v(\varphi_1) + v(\varphi_2)$$

$$\#var(\varphi_1 \square \varphi_2) \leq \#var(\varphi_1) + \#var(\varphi_2)$$

Substituindo:

$$v(\varphi_1) + v(\varphi_2) \geq \#var(\varphi_1) + \#var(\varphi_2)$$

Logo é verdadeiro

Por 1), 2), 3) e 4) e pelo princípio de indução estrutural para $\mathcal{F}^{CP}$, fica provado que:

$$v(\varphi) \geq \#var(\varphi)$$

$$b- 1) \vdash(\perp) = 0$$

$$\#b(\perp) = 0$$

Logo é verdade que $\vdash(\perp) \geq \#b(\perp)$

$$2) \vdash(h_i) = 0$$

$$\#b(h_i) = 0$$

Logo é verdade que $\vdash(h_i) \geq \#b(h_i)$

3) Caso de negação

Assumindo que $\vdash(\varphi) \geq \#b(\varphi)$

Seja $\varphi = \neg \psi$, $\psi \in \mathcal{F}^{CP}$

$$\vdash(\varphi) = \vdash(\neg \psi) = 2 + \vdash(\psi)$$

$$\#b(\varphi) = \#b(\neg \psi) = \#b(\psi)$$

$$\text{Como } 2 + \vdash(\psi) \geq \#b(\psi)$$

Logo é verdade que $\vdash(\varphi) \geq \#b(\varphi)$

4) Conectivos binários

Seja $\varphi = (\psi_1 \square \psi_2)$, $\psi_1, \psi_2 \in \mathcal{F}^{CP}$ e $\square \in \{\wedge, \vee, \rightarrow, \leftrightarrow\}$

$$\text{H. I.: } \vdash(\psi_1) \geq \#b(\psi_1) \text{ e } \vdash(\psi_2) \geq \#b(\psi_2)$$

$$\vdash(\varphi) = 2 + \vdash(\psi_1) + \vdash(\psi_2)$$

Pela hipótese sabemos que

$$\vdash(\psi_1) + \vdash(\psi_2) \geq \#b(\psi_1) + \#b(\psi_2)$$

Logo

$$2 + \vdash(\psi_1) + \vdash(\psi_2) \geq 2 + \#b(\psi_1) + \#b(\psi_2)$$

Sabemos pela definição de b que:

$$b(\varphi) = b(\psi_1) \cup b(\psi_2) \cup \{\square\}$$

Então:

$$\# \mathcal{L}(\varphi) \leq \# \mathcal{L}(\varphi_1) + \# \mathcal{L}(\varphi_2) + 1$$

Comparando com a hipótese:

$$\text{como } d > 1$$

$$2 + \# \mathcal{L}(\varphi_1) + \# \mathcal{L}(\varphi_2) > 1 + \# \mathcal{L}(\varphi_1) + \# \mathcal{L}(\varphi_2)$$

Conclusão:

$$h(\varphi) \geq 2 + \# \mathcal{L}(\varphi_1) + \# \mathcal{L}(\varphi_2) > 1 + \# \mathcal{L}(\varphi_1) + \# \mathcal{L}(\varphi_2)$$

Logo fica provado que:

$$h(\varphi) \geq \# \mathcal{L}(\varphi)$$

$$c- \quad v(h) \geq v(\varphi[\perp/h_7])$$

i) Para $\varphi = \perp$

$$v(\perp) = 0$$

$$\perp[\perp/h_7] = \perp$$

$$v(\perp) = 0$$

$$0 \geq 0$$

$$ii) \quad \varphi = h_i \begin{cases} i=7, & v(h_7)=1; v(h_7[\perp/h_7])=0 \\ i \neq 7, & v(h_i)=1; v(h_i[\perp/h_7])=1 \end{cases}$$

Logo para $\varphi = h_i$ é verdadeiro

iii) Para $\varphi = \neg h_i$

$$v(\neg h_i) = v(h_i) = 1$$

$$v(\neg \varphi) = v(h_i) = \begin{cases} 0, & i=7 \\ 1, & i \neq 7 \end{cases}$$

Logo é verdadeiro
