

$$\text{bul}(x : y : ys) \mid x \leq z = x : z : zs$$

$$\mid \text{otherwise} = z : x : zs$$

where $(z : zs) = \text{bul}(y : ys)$

$\text{bul } l = l$

—— 4 ——

① $\text{bul}[5, 3, 1, 2, 4]$

$x = 5 ; y = 3 ; ys = [1, 2, 4]$

↓

$\text{clama}(z : zs) = \text{bul}(y : ys)$
 $= \text{bul}(3 : [1, 2, 4])$
 $= \text{bul}(3, 1, 2, 4)$

② $\text{bub} [3, 1, 2, 4]$

$u = 3$; $y = 1$; $ys = [2, 4]$

$\text{change } (z : zs) = \text{bub } (y : ys)$
 $= \text{bub } (1 : [2, 4])$
 $= \text{bub } (1, 2, 4)$

③ $\text{bub} [1, 2, 4]$

$u = 1$; $y = 2$; $ys = [4]$

$\text{change } (z : zs) = \text{bub } (y : ys)$
 $= \text{bub } (2 : [4])$
 $= \text{bub } (2, 4)$

④ $\text{bub} [2, 4]$

$x = 2 ; y = 4 ; ys = []$

$\text{chama}(z : zs) = \text{bub}(y : ys)$
 $= \text{bub}(4 : [])$
 $= \text{bub}(4)$ $\begin{matrix} \nearrow & \uparrow \\ z : zs \end{matrix}$

Este é o caso: $\text{bub } l = l$
 $= 4$

Agora que já temos um valor e não
uma lista podemos comparar x com z .

Fazemos a recursividade tendo em conta a parte
da função

$| x \leq z = x : z : zs$

$| \text{otherwise} = z : x : zs$

⑤ $\text{bub}[2, 4]$

$$n = 2 \quad z = 4$$

logo $2 \leq 4$ Verdade logo

$$\begin{aligned} \text{bub}(2, 4) &= 2 : 4 : [] \\ &= [2, 4] \end{aligned}$$

$\uparrow \quad \uparrow$
 $z : z\Delta$

⑥ $\text{bub}[1, 2, 4]$

$$n = 1 \quad z = 2$$

logo $2 \leq 2$ Verdade logo

$$\begin{aligned} \text{bub}(1, 2, 4) &= 1 : 2 : [4] \\ &= [1, 2, 4] \end{aligned}$$

$\uparrow \quad \underbrace{\quad}$
 $z : z\Delta$

⑦ $\text{bub}[3, 1, 2, 4]$
 $n = 3 \quad z = 1$

$\text{logo } 3 \leq 1$ falso logo

$$\begin{aligned} \text{bub}[3, 1, 2, 4] &= 1 : 3 : [2, 4] \\ &= [1, 3, 2, 4] \\ &\quad \quad \quad \uparrow \quad \quad \quad \underbrace{\quad} \\ &\quad \quad \quad z \quad \quad \quad z+1 \end{aligned}$$

⑧ $\text{bub}[5, 3, 1, 2, 4]$
 $n = 5 \quad z = 1$

$\text{logo } 5 \leq 1$ falso logo

$$\begin{aligned} \text{bub}[5, 3, 1, 2, 4] &= 1 : 5 : [3, 2, 4] \\ &= \underline{\underline{[1, 5, 3, 2, 4]}} \end{aligned}$$
